RE: 2011 Load Forecast PPL Wallingford Energy, LLC

Dear Ms. Roberts:

PPL Wallingford Energy, LLC ("PPL Wallingford") presents the following information for the Siting Council's use in its annual forecast of loads and resources.

PPL Wallingford owns and currently operates five (5) LM6000 simple cycle generating units, each with a capacity of forty-five (45) megawatts, located in Wallingford, Connecticut (the "Facility"). The Facility operates in a peaking mode. The Facility uses natural gas as its sole fuel. The Siting Council approved the construction of the Facility in Petition No. 451.

Please contact me if you have any questions.

Very truly yours,

Jesse A. Dillon
